**EuroSkyPark now has a new office in Santiago de Chile. With the emerging renewable energy market in the South American country, there is a growing demand for EuroSkyPark's data transmission solutions.**

The generation of wind and solar energy holds huge potential, both along the 4,000-kilometer coastline and in very remote areas such as the Atacama Desert. Chile has undergone rapid development in this area to become one of the world's pioneering countries.

Satellite communication is predestined for the challenging geographical conditions in the sparsely populated Andean country. For this reason, plant manufacturers and the energy industry are increasingly asking for EuroSkyPark's communication systems: they are robust, blackout-proof even under

harsh climatic conditions and capable of reliably controlling very high power plant outputs.

**EuroSkyPark's new address:**

EuroSkyPark (Ltda.)  
El Golf 40, Piso 12  
CL – 755 00 00 Las Condes  
Santiago de Chile
